BID # 2013-23 SHERIFF BODY ARMOR

ADDENDUM #2
January 15, 2013

We received the following question regarding this bid:

Question # 1: Under Technical Specifications, Item 5 on page 8, it states:

Weight: The will county sheriff's office has determined that there is a direct correlation between the aerial weight (weight of a 12inch by 12 inch section of the protective panel) of a vest and acceptable comfort levels. Therefore, no vest with a measured weight of more than **.85** pounds per square foot will be accepted. Aerial density testing shall be conducted prior to bid submission and the NIJ report shall be sent with vest bid.

Answer # 1: It should read: "Therefore, no vest with a measured weight of more than **.88** pounds per square foot will be accepted."

Question #2: I am inquiring referencing bid bond on bid 2013-23. The 10% bid bond is that only for total at present price?

Answer #2: Under "Instructions to Bidders" on page 4, "Bid Security" is states:

The bid bond should be **10%** of the "**GRAND TOTAL**" for purchase of 100 vests per year at the 1st, 2nd and 3rd year pricing listed, including the optional price increase of up to 5% per year, as allowed on the bid form.

Therefore, the 10% would include all three (3) years at the extended cost, as this contract is awarded for a total of three (3) years.

Question # 3: What is the caliber and velocity of the Winchester 180gr SXT?

Answer #3: It is a 40 caliber SXT, however, we have not chronographed the velocity. We shoot it out of a 4.5" barrel which our standard issue Glock model 22 pistol. That is the minimum requirement for vest stopping power for our duty round out of our duty firearm.
